

Abstract

A fixed assets management system for calculating depreciation expenses for fixed assets and revaluing varied fixed assets when fixed asset variations occur includes a database server (1), an application server (2), and a plurality of client computers (4) linking to the application server through a network (3). The application server includes a depreciation method selecting module (21) for selecting suitable depreciation methods for fixed assets; a depreciation period setting module (22) for setting appropriate depreciation periods for fixed assets; a depreciation expense calculating module (23) for calculating depreciation expenses according to purchase prices, depreciation methods and depreciation periods of fixed assets; and a fixed asset variation management module (24) for revaluing varied fixed assets when fixed asset variations occur.
